

We would be delighted to have the opportunity to engage with community's potential end-users and share details about our innovation, E-Plaster® and to review and revise the product as required to address the specific requirements of the community.

E-Plaster® as a wearable patch can deliver therapeutically effective doses of electrotherapy, and

At this stage of development, we would like to understand the requirements and wishes of the community members who are dealing with chronic wounds, either as a result of direct physical injury, infection of a wound, wound resulted from prosthetics or related.

- what technical, personal barriers or interest there might be when implementing tele-health facilities to manage wounds;

-what difference would it make personally to patients and families if wounds can be healed rapidly and completely with E-Plaster®.
